

Sandstrom Coating Technologies is a 66-year old manufacturer of specialty paints, coatings, and adhesives. We are seeking an experienced Research and Development Chemist to join our staff. Above all we value an individual that is a team player and willing to go the extra distance to satisfy our customers' needs.

**Requirements:**

- BS/BA in Chemistry with 5+ years of experience in the coatings industry.
- Working knowledge of general chemistry, calculations and laboratory techniques.
- A great interest in new technologies, a strong desire to learn and a high level of motivation.
- Excellent communication, interpersonal and computer skills.

**Responsibilities:**

- Develop new and unique coatings formulations based upon customer requirements.
- Develop new test methods as required.
- Conduct product performance testing and competitor product versus company product evaluations.
- Compile, record, organize and analyze experiment data and observations.
- Perform technical tasks under minimal supervision in accordance with industry-defined standard procedures.
- Conduct technical service property testing according to customer requirements.
- Set up and operate standard testing equipment and coating application apparatus.
- Perform and initiate non-routine technical tasks as required per project.
- Interact with plant personnel on the scale-up of new products and batch issues.
- Limited travel to customer locations.
